## Mission

Working towards creating smart solutions in this digital age.

## Vision

To be a technology company that creates digital solutions that solve problems in our society

# Our Values

## Collaboration

Ensuring great teamwork by having teams made up of several developers with different skill set all working on a common goal.

## Innovation

Helping our people in our organizations achieve their full potential, through fostering creativity and disruptive innovation when solving challenges

## Integrity

Working to deliver services without compromising our professional ethics and maintaining transparency on our organization and with our customers

## Quality

Our provided ICT solutions function as per user requirement and are highly effective, robust , secure and reliable.

# Our Services

## Software Development

We work with businesses directly to provide a range of services from custom software solutions to technical expertise from a team of talented and experienced in the field. We provide advice for managing their software systems, architectures, building custom solutions, and driving innovation through the development of advanced websites, mobile, desktop, and hybrid applications per business requirements.

We provide comprehensive quality assurance inbuilt to our custom software service model as well as on-demand QA and a suite of functional and usability software tests upon requests.

## Research & Development

We conduct applied research in various areas of information and communication technologies. We also develop data collection and entry systems for use in both qualitative and quantitative research in various fields.

## Payment systems

We create solutions around safe and efficient payment systems for websites and apps. We build payment systems for online and in-person retailers, subscriptions businesses, software platforms, marketplaces and other clients.

## Internet of Things Consulting

We provide strategic consulting, development, data analytics tools and application management using network of physical devices connected and exchanging data to solve business challenges and get new revenue streams via IoT technology.

# Our Services

## ICT Consulting

Techcraft provides ICT Consulting services that help organizations to put ICT assets at the service of their business needs and strategic vision. From the small private enterprises to major public entities, finding the best way to integrate IT systems and align them with the business needs and strategic goals, is central to an organization success. By supporting the entire Information Systems Life Cycle, Techcraft strives to enable its clients to maximize their value from ICT by exploiting a multi-dimensional approach and providing services along the following axes:

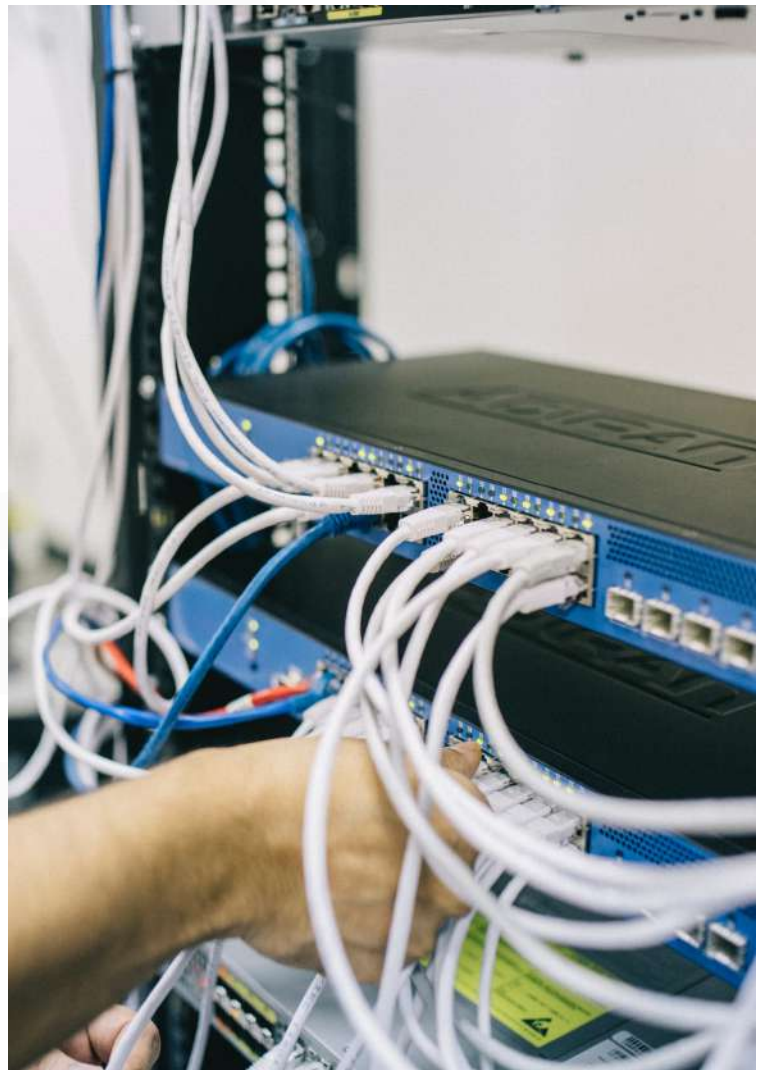

- ICT Strategies and Transformation
- Enterprise Architecture Design
- ICT Programme and Project Management
- Information and Systems Security
- IT Solutions Delivery.

## Artificial Intelligence Solutions

We harness the power of data to accelerate change of your business by leveraging AI and analytics for business to unlock new efficiencies and increase productivity using enterprise-wide AI solutions that deliver game changing results.

## Computer Networking

Ensuring enterprise network makes sense for their business while maintaining proper connectivity and permissions is what our certified network engineers do best through our computer network services. We possess the knowledge and experience gained from working with some of the largest companies to optimise network systems for any business.
